

*Introducing...*

## **DURALACTIN<sup>®</sup>** **C A N I N E** **JOINT PLUS SOFT CHEW**

**Helps Maintain Healthy Cartilage and Joint Function  
While Managing Inflammation**

### *What is Duralactin<sup>®</sup> Canine Joint Plus Soft Chew?*

- MicroLactin<sup>®</sup>, a patented dried milk protein from the milk of hyperimmunized cows, contains factors that appear to block cytokines to inhibit neutrophil participation in the inflammatory response.
- Glucosamine HCl, a building block of glycosaminoglycans and major component of cartilage, may help maintain health and resiliency of joints and connective tissues.
- Methylsulfonylmethane (MSM), a source of sulfur, helps support healthy muscles and joints.
- Omega 3 Fatty Acids (EPA and DHA) serve a critical role as structural and functional components of cell membranes. They manage inflammatory mediators while providing nutrients for healthy cartilage.
- Manganese is a co-factor in joint fluid synthesis.
- Zinc and Vitamin E protect cell membranes from free radical oxidation.

# DURALACTIN®
