

## **Trials\***

In a trial with kenneled dogs, the active ingredient of Harmonease™ in powder form was shown to stop stereotypical behaviors within 5 days of administration. Behaviors included lick granuloma, spinning in cage, and cowering. Some dogs exhibited more than one behavior.

## **Safety and Palatability\***

Dogs given Harmonease™ at different doses for 28 days tolerated it well.

Consult your veterinarian if your dog experiences any side effects.

In an acceptance test with 20 dogs in a 2 day trial, all dogs ate the tablets offered to them.

# Stressed? Looking for solutions?

Introducing  
**Harmonease™**

Chewable Tablets 500 mg  
for the management of  
stress related behaviors in dogs

# Harmonease™ Chewable Tablets

for the management of stress related behaviors in dogs.

## Does your dog exhibit some stress related behaviors?

- Chew or lick at himself for no apparent reason?
- Engage in repetitive movements, such as circling, digging, or cowering?

Some dogs have stress related behaviors that are abnormal responses to normal situations. Why do dogs do that? Some dogs may have experienced an injury. Some dogs do not know how to cope with everyday stress. Other dogs are exposed to stressful

environments that either over stimulate or under stimulate them.<sup>1</sup> Your veterinarian will make a diagnosis, address any medical problems, and suggest appropriate behavior therapy.

# How can you help your dog?

- Seek veterinary attention to determine if there is a medical problem.
- Make sure the entire family agrees which behaviors are acceptable and which are not acceptable.
- Try to identify sources of your dog's stress, such as being chased by children or other animals, or tension in the household.
- Provide a predictable environment and schedule for your dog.
- Make a point of rewarding acceptable behavior consistently, not taking it for granted.
- Try to ignore the undesirable behavior and avoid punishment. Punishment may increase your dog's stress.
- Redirect the behavior by asking your dog to come and sit. Offer exercise, play or a toy stuffed with food. Then reward your dog.
- Work with your veterinarian on a program of desensitization, counter conditioning, and other therapy if needed.

# How can Harmonease™ Chewable Tablets help your dog?

Harmonease™ is a natural blend of extracts from *Magnolia officinalis* and *Phellodendron amurense*. The combination of these extracts suggests a high level of response in a number of stress related behaviors.<sup>2</sup> In addition, the *Magnolia officinalis* contains a mixture of *honokiol* and *magnolol*, both of which lower stress without causing lethargy and sedation.<sup>3</sup>

## Harmonease™ Chewable Tablets

- Composed of natural ingredients
- Formulated as convenient once-a-day chewable tablets
- Should be used with appropriate behavior modification

## Dose

For dogs up to 50 lbs, give ½ tablet once a day  
 For dogs over 50 lbs, give 1 tablet once a day
