

BD VS 600 Veterinary Syringe

Sold only to veterinarians, the BD VS600 contains 600 syringes per case to ensure the most cost effective package available.

- BD PrecisionGlide™ Needle, the “World’s Sharpest”
- Color-coded hub for easy gauge identification.
- Thin stopper for easy dose measuring.
- Clear scale visualization and bold markings for dosage accuracy
- Easy-to-read graduations facilitate measurement.
- Plunger retaining ring helps prevent accidental pull out.
- Large flanges for secure grip.

BD Brand Syringes generate less packaging waste and reduce expenses:

- **Less Weight** -- Easy Peel packaging weighs 61% less than rigid “hard” packaging
- **Less Bulk** – BD paper packaging compacts – rigid “hard” packs cannot be compacted. This means more efficient use of space within the clinic.

The table below illustrates the weight of empty syringe packaging waste generated in an average 2-doctor veterinary practice. Compare the weight difference between the BD paper packaging and the leading rigid packaging:

Product	Usage (Eaches)*	Individual Package Weight (in lbs.)		Total Package Weight Difference (in lbs.)	
		BD Paper Pack	Rigid “Hard” Pack	BD Paper Pack	Rigid “Hard” Pack
3cc Needle/Syringe Combination	4,600	0.0041	0.0098	18.86	45.08
1cc TB Syringe w/ Needle	1,400	0.0036	0.0113	5.04	15.82
Total	6,000	0.01	0.02	23.90	60.90

*Syringe usage is based upon an average annual consumption rate by a 2-man veterinary practice utilizing BD brand needle/syringe combinations. Actual usage may vary.

BD Insyte™ Catheters

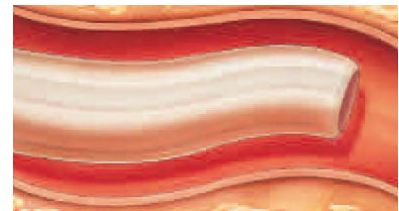

All BD Insyte™ Catheters incorporate the sharp BD needle technology and a tapered catheter tip to facilitate penetration and insertion. In addition, they are made with BD Vialon™ biomaterial, clinically proven to:

- Increase the ease of penetration
- Reduce splitting and peelback
- Resist kinking
- Reduce the risk of phlebitis up to 50%
- Reduce the risk of catheter related complications
- Increase indwelling time

BD Vialon™ Biomaterial Softens Inside the Vessel

A distinctive characteristic of BD Vialon™ biomaterial is its ability to soften up to 70% while in the vessel. By conforming to the shape of the vein, catheters made of BD Vialon™ biomaterial reduce the chance of irritation to the vessel wall, which in turn reduces the incidence of mechanical phlebitis, a major complication of IV therapy.
